Welcome to Invasive Species Ireland

Invasive non-native plant and animal species are the second greatest threat to biodiversity worldwide after habitat destruction. They can negatively impact on native species, can transform habitats and threaten whole ecosystems causing serious problems to the environment and the economy.

Invasive Species Ireland is a joint venture between the [Northern Ireland Environment Agency](#) and the [National Parks and Wildlife Service](#).

This website acts as a gateway to Invasive Species Ireland. From here, users will be able to find information on a range of species, policy related to individual species or groups of species, and action plans to deal with species that threaten the biodiversity and economies of Ireland.

You are encouraged to attend the Stakeholder Forum and get involved in tackling invasive species in Ireland. Invasive species are one of the greatest threats to the environment but with your help we can make a difference.
